## DETAILED ACTION

### *Election/Restrictions*

1. Claims 1 and 91 are directed to allowable products. Previously withdrawn from consideration as a result of a restriction requirement, all claims dependent upon the allowable claims are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the SPECIES restriction requirement as set forth in the Office action mailed on OCTOBER 30, 2007 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

### *Examiner's Amendment*

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Silverstein on December 3, 2008.

The application has been amended as follows:

**Claim 1:** Beginning at line 15 of the claim, the claim should read --compression of the spring element toward the distal end applies an axial stretching force to the balloon and decompression of the spring element away from the distal end releases the axial stretching force.--

**Claim 98:** Beginning at line 2 of the claim, the claim should read --said spring is compressed toward the distal end to apply axial tensioning and elongation to the balloon.--

**Claim 124:** Beginning at line 14 of the claim, the claim should read --of said tube lumen and said balloon interior such that compression of the spring element toward the distal end applies an axial stretching force to the balloon and decompression of the spring element away from the distal end releases the axial stretching force;--

**Claim 140:** The beginning of the claim should read --An assembly according to claim 139--

**Claim 141:** The claim should read --An assembly according to claim 139 wherein the cap element is screwed onto the spring housing thereby at least partially compressing the spring element toward the distal end, while the balloon is in an uninflated state.

**Claim 142:** The claim should read --An assembly according to claim 139 wherein the cap element is screwed onto the spring housing thereby at least partially compressing

Art Unit: 3763

the spring element toward the distal end, and the balloon element is at least partially inflated--

**Claim 143:** Beginning at line 3, the claim should read --element toward the distal end, and the balloon element is fully inflated--

***Allowable Subject Matter***

3. Claims 1-16, 18-34, and 91-145 as presented in the amendment dated August 22, 2008 and in the examiner's amendment above are allowed over the prior art of record.

4. The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose, either singly or in combination, the claimed device of a tube, a balloon element, and a balloon tensioning and/or wrapping device comprising a spring element at the proximal end of the assembly which activates a rod extending through the lumen into the balloon interior such that compression of the spring toward the distal end applies an axial stretching force to the balloon and decompression away from the distal end releases the stretching force.

5. The closest prior art of record is Boucher et al (USPN 6,719,773 B1), Reiley et al (USPN 6,248,110 B1), Scribner et al (USPGPub 2002/0156482 A1), and Osorio et al (USPGPub 2002/0161373 A1), all of which teach many elements of the device, but all of which fail to teach or disclose a spring element at the proximal end of the assembly

Art Unit: 3763

which applies an axial stretching force to the balloon, as required by independent claims 1, 91, 124, and 139.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
